

Project : Internet and Web systems: Week6

Application : Home Food

This is a Home Food application where user can order food prepared at home from this application. The chef also logs into the application where he/she can receive the order and prepare food for the user.

This Application is beneficial for busy working people, where they can just order the food and then pay from the app. They can pick up the food or opt for delivery option.

Technologies and Tools Used:

- 1.Java
- 2.Spring Boot Framework
- 3.MySQL Database
- 4.JSP,HTML,CSS
- 5.Thymeleaf
- 6.Maven
- 7.Hibernate
- 8.Inbuilt Tomcat Server
- 9.Bootstrap

Problems Encountered:

When I added the background image in the css file the image did not show up and I got the error Image not found at the given location.

I modified the syntax as per thymeleaf and gave the image body in the html page and then it worked.

Weeks addition: Added entity classes order.java and order detail.java

Order entity class for the database table order and orderdetail.java entity class for the table order_details.

Used Annotations @Entity @Id @Column in the entity class.

Also added the background image to the Home Page and few other properties in the html pages.
