IWS week 3:Branch W3.

In this week I included the code of the Footer and menu html pages.

I also included the java classes customerForm.java,CustomerInfo.java and Item classes in the packages of form and model.

While committing only Item classes went under the W3 branch remaining classes and HTML were committed to master branch.

Issues:

The header html though included in the Login Page, I cannot view it when I ran the login page. Need to check if this exists when whole project is ran.

Heroku Cloud:

I am deploying the project on the Heroku cloud. Unable to deploy the code due to few errors in the setup. Will figure out for next week submission.
