# Project : Internet and Web systems: Week1

Application : Home Food

This is a Home Food application where user can order food prepared at home from this application. The chef also logins into the application where he/she can receive the order and prepare food for the user.

This Application is beneficial for busy working people, where they can just order the food and then pay from the app. They can pick up the food or opt for delivery option.

Technologies and Tools Used:

1.Java

2.Spring Boot Framework

3.MySQL Database

4.JSP,HTML,CSS

5.Thymeleaf

6.Maven

7.Hibernate

8.Inbuilt Tomcat Server

Problems Encountered:

Initially I faced many problems for setup like for example I did not include the Databse server properties in the application file and the project was unable to execute, I got a message to either use inMemory Spring Database like H2 or configure persistent Database.

After including the server details in the application properties of spring file I was able to run the project.
